CERTIFICATIONS

AWS Certified Solutions

Architect – Associate

Amazon Web Services

Issued Aug 2026 · Valid to Aug 2029

SKILLS

Python

SQL

Machine Learning

Data Analysis & Visualization

Data Cleaning & Preparation

Statistical Analysis

FastAPI & REST APIs

Backend Development

SQLite & Database Management

LLM / Gen AI (Gemini API)

AWS (Solutions Architect)

EDUCATION

SIMATS Engineering

B.Tech, AI & Machine Learning

2022 – 2026

CGPA: 7.8

LANGUAGES

Tamil

English

SUMMARY

AI & Machine Learning undergraduate with hands-on experience in data analysis, backend development, and applied machine learning. Experienced in collecting and cleaning data, creating visual reports, developing REST APIs, integrating Gemini API services, and building full-stack applications with FastAPI and SQLite. Research experience includes statistical model comparison and hypothesis testing, complemented by AWS Solutions Architect certification. Seeking an entry-level role where I can apply analytical and technical skills to real-world problems.

WORK EXPERIENCE

Data Analyst Intern — 8Queens, Chennai, India

- Analyzed data trends to inform and guide business decision-making processes.
- Collected and cleaned data from various sources to ensure accuracy for analysis.
- Developed visual reports using data visualization tools to enhance team presentations.
- Collaborated with team members to identify key performance metrics.

PROJECTS

Chatbot MVP

- Built a full-stack chatbot web app using FastAPI, SQLite, and Google's Gemini API, with real-time streaming responses and persistent conversational memory via anonymous session cookies.
- Implemented a responsive UI with markdown/code formatting, a typing indicator, and error handling for empty input, API failures, and dropped connections.
- Deployed the app to a live, publicly shareable URL with no login required.

Comparative Analysis of NPP and ARIMA for Earthquake Magnitude Prediction (Research Paper)

- Comparing NPP and ARIMA models for earthquake magnitude prediction across 20 independent evaluation runs on a seismic event dataset.
- Achieved 92.00% mean accuracy with NPP versus 78.48% with ARIMA, a statistically significant improvement (independent-samples t-test, $p = 0.001$).
- Guided by Dr. V. Sheeja Kumari.

KEY STRENGTHS

- Analytical mindset with practical experience turning raw data into cleaned datasets, visual reports, and business insights.
- Strong backend development foundation, including REST API development, FastAPI, SQLite, API integration, and error handling.
- Applied ML and statistical reasoning demonstrated through comparative model evaluation and independent-samples hypothesis testing.
- End-to-end project ownership, from designing application logic and user-facing features to deploying a working full-stack product.
- Adaptable and self-directed learner with the ability to independently pick up tools such as FastAPI, Gemini API, and AWS architecture concepts.
- Problem-solving approach focused on reliability, data accuracy, clear communication, and practical implementation.
- Data-driven decision support experience, including trend analysis and identification of key performance metrics during internship work.
- Strong attention to application reliability, with practical handling of invalid input, API failures, and dropped connections in the chatbot project.
- Evidence-based approach to model evaluation, using repeated runs and statistical significance testing to compare predictive methods.
